

# A complete answer to *NIS 2* thanks to *NDR*

Faced with the growth and improvement of the cyber threat, Gatewatcher supports you in the implementation and strengthening of your cyber strategy, imposed by the **new NIS2 requirements**.

With a scope extended to **18 sectors compared to NIS 1**, you are one of the tens of thousands of stakeholders concerned by this new directive, who have to raise their level of cybersecurity.

## Essential or important entities, what are **my challenges** ?

According to the European directive NIS2, as an essential or important entity, **I must be able to:**

### *Identify and assess my risks*

- > Have complete visibility of all assets connected to my IS.
- > Identify my organizational and technical risks.
- > Define an appropriate security policy and consistent with the evolution of the threat.

### *Protect my data and sensitive information*

- > Control and secure the information and resources present on my IS.
- > Guarantee the integrity, confidentiality and availability of my IS.
- > Protect my IT against specific attack techniques - identity theft, data exfiltration, ...

### *Detect cyberattacks on my network and investigate*

- > Early detection.
- > Detect all types of threats, even the most advanced.
- > Detect an adversary at all stages of the killchain.

### *Manage and respond to my incidents*

- > Set a rapid response.
- > Guarantee the interoperability of my response with my other existing solutions for a 100% effective response.
- > Maintain my business activities in operational condition.

## NIS 2 : the advantages of NDR

Thanks to the NDR, **go further than a simple regulatory response**. Transform this obligation into a real opportunity to strengthen your defenses.

With its detection capabilities, Gatewatcher supports you in your compliance and responds to each of your challenges.

### *Identify and assess my risks\_*

- > Real-time inventory and mapping of all your assets (assets, users and uses) - IT / IoT / OT / VM / Cloud.
- > Identification and monitoring of your attack surface through an analysis of internal and public flows.
- > Establishment of a clear organization in terms of roles and responsibilities to ensure the effectiveness of your SOC, whatever its organizational model.

### *Protect my data and sensitive information\_*

- > Solution secured "by design".
- > Securing all of your IS resources and core trust.
- > Identification and control of incoming/outgoing communications (E/O; N/S) and all interconnections of your IS.
- > Complete control of your IS, whether it is entirely or partially partitioned into coherent security zones.

### *Detect cyberattacks on my network and investigate\_*

- > Detection of all types of threats by the combination of detection engines (Ransomware, Beacon, Powershell, Shellcode etc.)
- > Early detection at the first signs of an attack at each stage of the killchain.
- > Analysis of security events.
- > Logging.
- > Threat qualification and automated investigations.
- > Strengthening your forensic capabilities to track and analyze threats in depth, based on metadata.

### *Manage and respond to my incidents\_*

- > Clear and focused mapping of your compromised assets to initiate an immediate response.
- > Intelligent aggregation and prioritized processing of your alerts based on their criticality.
- > Orchestrated and automated response, under the control of a SOC.
- > Response integrated into your existing ecosystem (EDR, Active Directory, NGFW etc.) and without cuts.
- > Fast and detailed generation of reports related to alerts (COMEX).

## About us\_

- > Leader in advanced threat detection
- > Innovative NDR technology with cutting-edge AI
- > 360° detection enhanced by our CTI
- > A large network of international partners, CISOs and analysts who place their trust in us - EMEA, APAC, Europe
- > Recognised for our expertise by ANSSI, French Tech 2030
